

## Neighborhood Power Project

Empowering nonprofits in the clean energy revolution

*With the completion of several energy efficiency projects, including installing additional lighting and implementing EV charging stations, the ICNC promotes the safety of their occupants and a commitment to electrification.*

According to the U.S. Department of Energy, LED light bulbs use at least 75% less energy, and last up to 25 times longer, than incandescent lighting.

## ICNC Project Summary

The Industrial Council of Nearwest Chicago (ICNC) continues to advance their work in growing small businesses with the completion of several energy efficiency projects. The ICNC completed an exterior lighting install and established an electric vehicle charging station, demonstrating a commitment to electrification.

Future projects recommended for the ICNC include retrofitting interior LEDs, installing vending misers, and implementing a filtered water dispenser.

### Project financials

*The \$18,000 project cost was covered partially through a \$16,500 grant from the Neighborhood Power Project.*

### Energy saving improvements

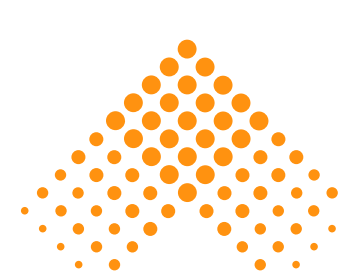

Exterior lighting install

Waste optimization and sorting
